

DAMPFAST - A WATERPROOFING MEMBRANE THAT'S IDEAL FOR FISHPONDS, PLANTER BOXES, BALCONIES AND EVEN DRINKING WATER TANKS!

If you are looking for a product that will waterproof your fish pond and not affect the fish or, one you can use for water tanks for potable drinking water, then Davco's DAMPFAST is the answer.

DAMPFAST, a non-toxic waterproofing membrane, is one of Davco Construction Materials' most versatile products. It is also ideal for a wide range of waterproofing projects including balconies, planter boxes, shower recesses and laundries.

According to John Moses, Davco's national marketing manager, the trend towards water features, planter boxes and water tanks in today's homes has created demand for an uncomplicated waterproofing product that doesn't require a science degree to apply.

"A quick drying, easy to use membrane, DAMPFAST fast tracks construction projects around the home making it an easy weekend job for the Do-It-Yourself handy person. Being non-toxic it is particularly suitable for potable water having been type tested for that purpose.

"A grey, flexible, 2-part waterproofing and sealing membrane, DAMPFAST eliminates the need for a reinforcement layer or matting. Although it is grey, you can overcoat it for finishing off a project. For instance you may want to tile a fish pond for decorative purposes. It is really user friendly" said John Moses.

Considerably reduced application time and limited mess on the job are big factors behind DAMPFAST's popularity according to John Moses.

“Trades people and DIY’ers alike, really appreciate DAMPFAST’S easy use benefits because they can get on with the job quickly and efficiently, avoiding unnecessary delays. This allows trades people to move onto their next project maximising their income. For projects around the home it can mean more precious leisure time.

“Being a waterproofing membrane, DAMPFAST prevents surface water penetration when applied correctly. Trade applicators using Davco’s DAMPFAST also have the peace of mind of knowing that it has been fully appraised by the CSIRO (Technical Assessment No 236), enabling it to be used on all Local, State and Federal Government jobs” John Moses added.

One 10lt/20kg unit of mixed DAMPFAST will cover approximately 12m² (when applied at a dry film thickness – 1.5mm).
